

ABSTRACT

The invention relates to a cover (1) for an energy conveying chain. Said cover
5 (1) comprises a first end region (2) and a second end region (3). At least one elastic section (4) is positioned between the first (2) and the second end region (3).

The elastic region (4) is configured in such a way that the ratio of a theoretical length modification of the cover (1) to an actual length modification of said cover (1) is less than 1.
